

# Kenneth Nwoye

Software Engineer | Backend & Full-Stack Development

Long Beach, California · 818-515-0203 · knwy@ymail.com · LinkedIn: <https://www.linkedin.com/in/kenneth-nwoye-a6332969/> · GitHub: <https://github.com/trulyepic>

## Professional Summary

Software engineer with 4+ years of professional software-development experience and a broader background in digital operations, data integration, release support, and financial operations. Experienced building production backend and full-stack applications with Python, Java, Django, FastAPI, GraphQL, Spring Boot, React, TypeScript, PostgreSQL, AWS, and CI/CD. Strong at modernizing legacy systems, designing APIs and data models, troubleshooting production issues, and delivering reliable features in ticket-driven Agile environments.

## Technical Skills

Languages & frameworks: Python, Java, TypeScript, JavaScript, React, Django, FastAPI, GraphQL, Spring Boot, Hibernate, SQL

Backend & data: REST APIs, GraphQL APIs, PostgreSQL, database design, migrations, query optimization, service-layer architecture, audit logging

Cloud & platform: AWS RDS, S3, Elastic Beanstalk, IAM, SQS, Railway, Kubernetes, Terraform/infrastructure as code, containers

Engineering practices: Automated testing, contract testing, CI/CD, Git, code review, refactoring, observability, security remediation, production support

## Professional Experience

### Universal Music Group — Software Engineer, Product & Services

#### Remote | Sep 2025–Present

- Design, develop, and maintain backend services using Python, Django, and GraphQL for product and internal-service workflows.
- Build API-driven systems with clean schemas, resolver logic, maintainable service layers, and PostgreSQL data models and migrations.
- Deliver end-to-end features across backend services and React/TypeScript interfaces, including context-aware product chat, approval workflows, rules management, notifications, and audit capabilities.
- Implement audit trails for transfer modifications, confidential-asset marker changes, and integration events, improving traceability for sensitive business actions.
- Develop safeguards for confidential assets, including mixed-marker guidance, batch controls, and warnings before sharing sensitive content.
- Improve approval workflows through normalized identity resolution, actioned-by tooltips, and clearer display names.
- Strengthen reliability and security through automated tests, admission-policy compliance, OAuth labeling, CodeQL remediation, observability improvements, and controlled recovery limits.
- Collaborate across engineering, QA, product, and platform teams through code reviews, iterative delivery, release coordination, and technical documentation.

### Universal Music Group — Software Engineer

#### California | Feb 2022–Sep 2025

- Contributed to decomposition of a legacy monolithic Java application into Spring Boot-based microservices, improving scalability, maintainability, and deployment flexibility.
- Built and maintained Java, Spring Boot, Spring, and Hibernate backend services with RESTful APIs and service-layer logic.
- Designed PostgreSQL schemas, updates, migrations, and optimized queries across monolithic and microservice-based systems.
- Developed and supported frontend applications using React and JavaScript, integrating UI workflows with backend APIs and reliable data flows.
- Supported REST and SOAP integrations during broader enterprise-system modernization.

- Participated in code reviews, refactors, production troubleshooting, and incremental improvements in a Git-based, ticket-driven environment.

## **Universal Music Group — Digital Release Support Manager**

### **Woodland Hills, CA | 2018–Aug 2021**

- Managed weekly digital front-line release deliveries for multiple territories and label partners, coordinating schedules, issue resolution, and delivery readiness.
- Partnered with label representatives and support teams to resolve release issues and maintain accurate operational records.

## **Universal Music Group — Data Integration Coordinator, e-Commerce Operations**

### **Woodland Hills, CA | Dec 2017–2018**

- Coordinated label and partner release workflows across US, Canada, and Mexico, ensuring products were ready for delivery.
- Maintained e-commerce partner spreadsheets, analyzed XML files, generated reports, and resolved label inquiries.

## **Universal Music Group — Mobile Operations & Digital Content Specialist**

### **Woodland Hills, CA | Apr 2017–2017**

- Coordinated metadata and source-audio delivery to mobile production teams and business partners, including iTunes and Verizon.
- Researched metadata/audio issues, managed mobile database content, fulfilled redelivery requests, and supported priority releases.

## **Universal Music Group — User Support Analyst, Financial Operations**

### **Woodland Hills, CA | Jun 2016–Oct 2016**

- Researched business-unit issues, tested defects, and performed special projects supporting financial operations.

## **Universal Music Group — Metadata Assistant, Digital Operations**

### **Woodland Hills, CA | Jul 2015–Jun 2016**

- Managed, updated, and organized hundreds of data projects using UMG R2; created track indexes and maintained accurate data-flow records in Excel.
- Converted physical concert and music-video assets into digital long-form content while following strict standards and confidentiality requirements.

## **Selected Project**

### **ToonRanks — Software Engineer / Developer**

- Built and operate the backend for a live rankings, reviews, and community platform.
- Designed API-driven workflows, environment-specific configuration, database migrations, and iterative deployments using Python and AWS/Railway services.

## **Education**

Southern New Hampshire University — Master of Science, Information Technology: Software Development, 2016–2019

GPA: 4.0

University of Baltimore — Bachelor of Science, Business Administration: Management, 2008–2013
